**ziply**fiber

When it comes to patient care, every second really does matter.

Healthcare is better when it's connected. Better internet service makes it possible.

There's nothing "one-size-fits-anything" about modern medicine. Delivering patient-centered care is hands-on and highly personalized.

Technology makes it easier to meet the needs of every patient — faster and more effectively — but personalized care requires lots of data and real-time collaboration among providers. That's why better patient experiences begin with better internet service.

Cable and wireless internet can't keep up.

Legacy solutions fall behind, but high-speed fiber internet has the power and reliability needed to deliver high-quality care to the people you serve. And only a local provider like Ziply Fiber can provide the same level of care and attention that your patients get from you.

When was the last time your internet provider cared enough to listen to you?

End-to-End Fiber

Local Sales, Operations and Support

Built for Business

Keeping healthcare connected

Capacity management
Our network usage is managed to ensure your patient experience will never be impacted by upgrades or individual component failures that may occur. With 60% of network capacity held in reserve, each route has enough overhead to handle the unexpected.

Built for business
Ziply Fiber is investing more than ever in our advanced, 100% fiber network to historically underserved communities across the Northwest, giving healthcare providers in our region the bandwidth and reliability modern healthcare demands — and the service providers deserve.

Redundant core
With a core backbone capable of 20+ terabytes per second and fully redundant local aggregation networks down to the hub site level, Ziply Fiber can handle your critical traffic and large electronic patient files, no matter what mother nature throws your way.

Regionally focused
We're local, with headquarters in Kirkland, Washington, and offices in Everett; Yakima; Beaverton, Oregon; and Hayden Lake, Idaho. Our communities are healthier when they are better connected, which is why we're growing the Northwest's only built-for-business fiber network.

Power and performance for healthcare

- Reliable and fast fiber internet keeps up with the demands of telehealth, guest WiFi traffic, real-time communications, patient management and the Internet of Medical Things.

- Real-time critical application prioritization maintains smooth operation across every level of your organization.

- Symmetrical up/down speeds support seamless communication between staff and patients.

- Intuitive performance and security dashboard lets you track alerts, policy adherence and performance.

- Encrypted and secure connectivity works to maintain HIPAA compliance from end to end.

- Integrated firewall, content-filtering antivirus, and intrusion detection and defense help keep financial data and mission-critical information safe from bad actors and prying eyes.

- Managed WiFi ensures the best coverage, keeps internal traffic secure while enabling guest WiFi.

- Fiber-powered business voice delivers crystal-clear calls between patients and providers.

Fiber vs. Cable

Not all internet connections are created equal.

	Ziply Fiber	Cable*
Download speed	100 Mbps to 10 Gig	10 Mbps to 1.25 Gig
Upload speed	100 Mbps to 10 Gig	15 Mbps to 35 Mbps
Fiber reaches	Your site	Your block
Connectivity to your locations	Dedicated to you	Shared with 32-64 customers
Always get the bandwidth you purchased	Yes	No
Reliability	99% end-to-end SLA	?
POS prioritization	Yes	?
Proactive monitoring	Yes	?
Network performance visibility	Yes	?
Local support team	Yes	?
Configuration management	Automated	?
DDoS protection included	Yes	?
